EDUCATION

Angeles University Foundation

Bachelor of Science in Information Technology (concentration: web and mobile development)

July 2018 January 2023

EMPLOYMENT

Full Stack Developer

FullStack HQ | Feb 2024 – April 2025

Employee of the Year, 2024

- Led end-to-end development of Raket.PH (Next.js + Strapi e-commerce) — owned UI/UX, refactored backend, optimized API performance, integrated GA/Tag Manager, and deployed on AWS/DigitalOcean with Cloudflare CDN.
- Shipped WeCampaign across web and mobile (Next.js + Xano site, React Native app) and architected BlankSpaceGolf (Next.js + Node.js) with JWT rotating-refresh auth, RBAC, and image detection.
- Owned full-stack delivery of HikeSEO (Laravel + InertiaJS/Vue) and Natiive (headless WordPress + Next.js), plus headless builds, API integrations, and mobile debugging across several other client projects.

Full Stack Developer

Hanpoom | Jul 2025 - Sept 2025

- Built an LLM-powered localization tool that automatically translates Korean text in product photos to English, eliminating manual photo redesign and supporting the Shopify store's English-market expansion.
- Developed LLM features to translate and summarize customer reviews, surfacing Korean-language feedback to English-speaking shoppers and condensing long review threads into quick, scannable summaries.

Full Stack Developer

MRKD.Inc | Sept 2025 – Present

Winner, Claude Agentic Hackathon

- Pioneered watertyt, a production SaaS platform for the pool design and construction industry spanning quoting, project management, scheduling, and financial tracking — architected as an Nx monorepo with a React 19 (TanStack Router/Query) frontend and a NestJS + Fastify backend on PostgreSQL/Drizzle.
- Built AI-driven features with Google Gemini and pgvector — embedding-based semantic search, an AI assistant with conversation history, and prioritized recommended actions — and integrated Xero (P&L/budget sync), Gmail/Mailgun, and Twilio for accounting, email, and SMS.
- Engineered the production backbone: multi-tenant row-level security, OAuth (Google/Apple) + Argon2 auth, BullMQ background-job queues, and Dockerized multi-arch deploys to Google Cloud via GitHub Actions CI, backed by 800+ automated tests.
